Role of the HMG-CoA reductase inhibitor pravastatin on the phenotype of the cytoskeleton and membrane lipid dynamics in human platelets. Statins are known to exert pleiotropic effects in various cell systems, including platelets. This study was undertaken to evaluate the effects of the HMG-CoA reductase inhibitor pravastatin on the morphology of platelets and on their aggregation capacity. Six healthy volunteers were investigated before and after a 10-day treatment with pravastatin. Platelet activation was induced by collagen or by the cyclooxygenase-1 (COX-1) agonist iloprost. Collagen-induced alpha-granule secretion of P-selectin, thromboxane B₂ (Tx_B(2)) and the fibrinogen receptor GPIIb/IIIa was quantified by flow cytometry. Platelet shape change and aggregation was studied by both light and electron microscopy, and platelet membrane dynamics by fluorescence microscopy and by fluorescence anisotropy and ³¹P-NMR. Pravastatin impaired platelet aggregation in response to ADP but not to collagen. Inhibition was more pronounced at lower platelet concentrations. No changes were observed in the production of COX-1 metabolites or in the kinetics of platelet shape change and aggregation, but pravastatin caused a significant (PQ: Extracting file contents using the java FileReader I have a text file which I am trying to extract the details from it using java.
