The AutoCAD 2008 desktop application was released in March 2009 and is available for Microsoft Windows operating systems. It is marketed in North America and many other countries. Autodesk's product range also includes Microsoft Office, Autocad LT, Inventor, Alias, ENOVIA, Accelorian, Archetype, Dynamo, Inspiron, MotionBuilder, Revit, and Fusion 360. Autodesk claims that its products have been installed on more than 100 billion workstations worldwide. In December 2016, Autodesk announced plans to develop and launch AutoCAD LT, a free web-based desktop CAD application. Autodesk began offering AutoCAD LT to the public in March 2017, following its public beta testing period. The web-based application is accessible through any modern web browser, does not require installation on the end-user's device, and uses the basic functionalities of the desktop application. Autodesk anticipates AutoCAD LT will be supported and enhanced over time. On April 23, 2018, Autodesk announced the release of AutoCAD 2020 as the successor to AutoCAD LT. The release of AutoCAD 2020 was to coincide with the product's 20th anniversary. For the most part, the AutoCAD 2011 release had a major overhaul with many new features and improvements. New features and tools are listed below. AutoCAD Basic The user can create dimensioning, text, and annotation objects on the drawing canvas. The user can enter coordinates and dimension on objects. The user can enter text and text styles. The user can measure distances and angles, measure objects, and plot coordinates. User-defined toolbars, palettes, and keyboard shortcuts may be added to the program. Drawing views, layers, and grids are included. Other new features include a texture editor, a shape-specific drawing effector, a page-layout creation tool, a layer-based help system, and a measurement-based review tool. The following new features were included in the 2011 release: Geometry-based drawing and dimensioning Text placement, refinement, and editing Geometry-based cutting, drilling, and jointing Surface-based layer editing Parametric The user can create parametric objects such as arc and circle segments and splines. A feature for making these objects interactively is available in the form of the Parametric Toolbar.

Polyurethanes are produced by reacting polyisocyanates with hydroxyl containing compounds. One method of preparing polyurethanes is the reaction of a polyisocyanate with a polyol and water to produce a polyurethane prepolymer that is subsequently chain extended and/or cross-linked to form the final polyurethane product. If the polyisocyanate is a diisocyanate, it is known to use a mono- or polyfunctional active hydrogen compound as a chain extender to provide chain extension of the prepolymer. If desired, a surfactant may be incorporated into the prepolymer and the prepolymer chain extended with water. If the prepolymer is a prepolymer terminated with an isocyanate reactive compound such as a diisocyanate, a chain extender such as a mono- a1d647c40b
