History AutoCAD was first released in December 1982 as a desktop application running on microcomputers with internal graphics controllers. It was the first CAD program to be released for personal computers. AutoCAD ran on the IBM PC/XT, and the first commercially available home version was bundled with that computer in December 1983. The program was developed by a small team of Autodesk engineers under the leadership of David Reed, a mechanical engineer at Texas Instruments. Reed was hired by Autodesk to work on an initial CAD program for the TI 99/4A calculator. He was joined by six more engineers from TI who split their time between design and programming work on CAD. Within a few weeks, the CAD code was sufficiently complete to demonstrate that it could actually be used to create usable drawings. The very first drawings created with the new program were for a water heater. As the CAD code was ready, the engineers left TI to form the company Autodesk, Inc. in Palo Alto, California. They kept the program names to avoid legal issues with TI. The original developer's version of the program was released in December 1982. As a result of rapid adoption of the program by a very large clientele, Autodesk began releasing quarterly upgrades in January 1983. By the end of 1985, Autodesk released six different versions of AutoCAD, both desktop and web-based, and quarterly updates are still released. The earliest web versions of AutoCAD used the L.A.N.Y. (Linked Application Network and YEart) network protocol. As of 2018, Autodesk has been using the HTTP (Hypertext Transfer Protocol) protocol since version 2013. In 2014, Autodesk released the first official history of AutoCAD. This user-written history was produced by a group of AutoCAD employees. The original five-part series can still be found online. In September 2014, Autodesk released the first official history of AutoCAD for Android tablets, Windows 8 and Windows 7. In this user-written history, one of the authors, Tom Pedigo, was a software engineer at Autodesk for more than 20 years, before joining the "History of AutoCAD" group. In 2015, Autodesk released the first official history of AutoCAD for Microsoft Windows and iOS devices. In 2017, Autodesk released the first official history of AutoCAD for Android and

### What's New in the?

Stay on track using the “Revision History” option, which shows you the history of the objects in your drawing and allows you to continue working on your drawing with a history of what’s happened already. Export to HTML5: Create high-quality HTML5-compatible drawings that can be viewed in a web browser on any device. Markup Assist Markup assist allows you to import and markup text directly into a drawing, creating a unified, persistent text template that can be applied across multiple drawings. You can view, edit, and apply the template to your drawings, and also apply that template to new drawings. Markup assist offers two types of markups: graphic and descriptive. The graphic markup is for an icon or text, and the descriptive markup is for text annotations that describe that icon or text. The system supports previewing and applying markup to your drawings while you type. The final markup is shown on the right side of the application window in real-time as you type. Markup Assist 1.0 provides the following: Adds the new text annotation type “Graphic” and “Descriptive” to the dropdown menu of typeable text annotations. Add a default graphic for “Graphic” and “Descriptive” text annotations. Add support for icon previews on the icon dropdown menu. Imports external text templates from Office Online to add pre-defined text and markups to drawings. The first time you open an Excel file in the browser, you may be asked to install Microsoft Office 365 ProPlus. To install Office 365 ProPlus, open Microsoft Excel.com. In the left-hand navigation, click on Install. Select the Office 365 ProPlus option and click on Install. Now that you are connected to Office 365, you can log into your Microsoft Office account from inside the browser, or if you are already logged into Office 365, you can get to your account from inside the browser by clicking on the Office 365 icon on the top right. This icon appears in the browser when you are connected to Office 365. In Office 365, click on the gear icon in the top right corner and select Settings. Now, click on the “Password or Security Key” link in the Settings dialog box that appears. Select “Manage my security keys” and click
