Communication AutoCAD supports the use of RS-232/RS-422 serial or parallel port connectors. AutoCAD's communication stack has been extended from RS-232/RS-422 to USB and TCP/IP networking standards. ATC is a proprietary extension to AutoCAD for communication over TCP/IP networks. The ATC C++

libraries provide the tools and a programming model to implement communication with AutoCAD and other AutoCAD applications over a network. AutoCAD 2015 includes dedicated Windows-based TCP/IP, file transfer, reverse engineering, and software development kits. Task automation AutoCAD allows users to automate a number of tasks by using its built-in scripting environment. These are available in the form of object-oriented script files (.act files) as well as stand-alone scripts. Object-oriented scripts are interpreted at run time and are not executed directly by AutoCAD. The list of objects available in the scripts include drawing objects (geometries, text, dimensions, views, etc.), imported objects (points, lines, areas, arcs, circles, text objects, polylines, etc.), 3D features (planes, surfaces, etc.), and the current database. Stand-alone scripts are .lsl files, which are stored as stand-alone .lsp files in the user's installation path. Scripting is done using a combination of both command line and GUI scripting. The command-line version is the Microsoft Windows Command Prompt; the GUI scripting is done using the Script Editor GUI window. The command-line scripting is similar to text-based scripting of the traditional Script Editor environment. The GUI scripting is similar to the GUI scripting done in the Microsoft Visual Basic environment. Scripting is very important to AutoCAD, and a typical AutoCAD installation contains a number of sample scripts, ranging from simple one-line scripts to larger, more complex, multi-page scripts with loops, nested functions, etc. Scripts can be used for a wide variety of purposes, such as drawing, importing, exporting, text, point placement, node placement, menu and dialog operations, etc. CADGnub CADGnub is a plug-in to AutoCAD used for programmable drawing commands, called applications, written in Python. The CADGnub applications are essentially scripts, where the user interface is the default Drawing window. They can be used to manipulate objects, perform file operations, and do many other tasks a1d647c40b

When the licensing dialog box opens, press the key, enter it. \end{document} A: You can't. That license key will be removed from your mac installation when you reinstall and renew your license. You need a new serial key. Go to your Autocad website ( log in, and select "Activate". In the box that pops up, enter your activation key, and then "Activate". If you didn't save your key in the previous dialog, the activation should now be active and you can continue to use the software. A: The good news is that the key is saved in ~/.autodesk/media\_license/license.dat. The bad news is that you need to activate your subscription license on the software. This can be done either on the software (recommended) or on the website. Now, to activate the key, log on to the website, and activate the licence. This will overwrite the key. But you need to be the Autodesk account holder to do it. As @SuperPeter pointed out, the activation key is removed when the product is reinstalled. So,

Drawing Flip Tool: A tool for drawing text and graphics. The tool's shape is an isosceles right triangle with an angle of 45 degrees, such that the isosceles and right angles are both isometric views of the same figure. This combination of views, sometimes referred to as “top-down and right-side up”, is very common in architectural drawing. (video: 8:47 min.)
