Extract Phone Numbers From Web Sites Software Crack+ Free Download Latest

Extract 1 Phone Number From Web Sites Software is a small Windows application designed specifically for helping you extract and save multiple telephone numbers from different websites. User-friendly layout The clean feature lineup makes it easier for you to discover and tweak the program's features. Additionally, you may load some sample URLs provided by the program in order to check out its capabilities. Main features Extract Phone Numbers From Web Sites Software gives you the freedom to add a single link or load a list with URLs from plain text file format, and clear the workspace with just one click. Taken into consideration that countries have different lengths for phone numbers, there is an option to select between several different lengths for the numbers you want to extract, more specifically from 5 up to 20. It is important to mention that it offers support for batch operations, which means you can add multiple links and process them at the same time. Plus, a smart feature included in the package automatically ignores dashes, spaces and other characters that are placed between phone numbers. Exporting options The application lets you include URLs in the results, check out the extracted phone numbers directly into the main window, copy the results to the clipboard (so you can easily paste data into other third-party tools), save the information to plain text file format, as well as export the phone numbers to CSV. Performance Tests have shown that Extract Phone Numbers From Web Sites Software carries out a task quickly and without errors. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not hampered. Bottom line To sum things up, Extract Phone Numbers From Web Sites Software proves to be a reliable application that comes bundled with a handy suite of configuration settings for helping you extract phone numbers from multiple websites at the same time.
