The long-running legal battle between Autodesk and Unistudios, also known as Ulead and a subsidiary of the Chinese company Kingsoft, began on January 14, 2016, when Autodesk filed a suit to get a temporary restraining order against Ulead in Massachusetts, and to declare that certain Ulead trademarks were infringing AutoCAD Crack Mac trademarks. According to Autodesk, the two companies entered into an exclusive licensing agreement, which allows Ulead to distribute AutoCAD software, but not the rights to the software's logo, name or other graphical assets. The agreement was to last for five years and extend through 2028, at which point Autodesk could exercise an automatic termination clause, and allow Ulead to sell only its own products. Autodesk alleges that Ulead's efforts to sell off licenses under the trademark rights of AutoCAD, without first giving Autodesk the chance to purchase them, has placed the valuable intellectual property into the hands of a competitor in the market. Autodesk believes that this strategy is being used in order to drive Ulead out of the CAD market and eliminate Autodesk's ability to compete, and thus to drive up the prices charged to customers by Ulead. In its own view, Autodesk has been the victim of Ulead's attempt to shift sales of AutoCAD from one company to another. Ulead denies the allegations and asserts that Autodesk's contract ended on September 30, 2016, at which point it could no longer demand that Ulead pay royalties on the use of the AutoCAD brand. The company also claims that Autodesk has not taken proper steps to protect its trademarks, in contravention of the contract. Ulead supports its position with its own suit against Autodesk for trademark infringement. The first suit was filed in the southern district of New York on March 14, 2016, and a similar action was filed on January 12, 2017 in the Northern District of California. The California complaint also sought an injunction against Autodesk. Autodesk filed a motion to dismiss the New York action in May, and the action was transferred to the Northern District of California, where it was consolidated with the Ulead suit. In August, Autodesk filed for summary judgement in the consolidated cases, in which it moved to dismiss the Ulead suit on the grounds that Autodesk was not infringing any of Ulead's trademarks.

Forum Since 2007, there is a fully supported AutoCAD Forum which publishes information and guides to AutoCAD users. The forum is still active. New features The current version of AutoCAD (AutoCAD 2017) is version 2017. This release has the following features, among others: Project Manager The Project Manager adds Project Templates (Microsoft Project) to AutoCAD: A template is a pre-made template of a project (typically for different software) which enables you to start work on a new project by simply loading the project template. Project Manager also integrates with the "Project Browser". Features The Project Manager allows users to: Create projects Select the version of Microsoft Project used to create the project View and select the template Add and edit list entries Export and Import the Project Template Open Microsoft Project documents from within AutoCAD, the Microsoft Office suite or other applications Export AutoCAD projects as Microsoft Project documents CAM (CAD Applications Manager) AutoCAD 2017 has a new CAM (CAD Application Manager) project system, which provides a very intuitive interface for launching CAD applications. By default, the CAM is located in the AutoCAD Application menu, to the left of the right-click contextual menu. When the CAM is activated, a number of default templates are presented to the user. The user may choose from these templates, or create his/her own custom templates. Customers who order a new AutoCAD license, will be given an option to pre-select a product. This product is then available under the CAM as a template. Using the CAM, the user can launch and edit that product. Any additional product templates may be made available to the user as well. This is achieved by downloading additional files to the AutoCAD installation directory, after initial installation. CAM integrates with the Task Scheduler. By default, the application runs each time the user logs on. Alternatively, the user may create a schedule to run a particular task, or application, at a specified time of day or week. Features Job Manager The Job Manager is a tool for managing and scheduling AutoCAD, DWG and PDF files. It is integrated with the CAM. Users may create a job. These jobs are broken up into stages. The user may add, edit or delete jobs and stages. This process of adding stages may be performed multiple times a1d647c40b
