Designers use AutoCAD to create drawings, including: 2D drawings, such as line drawings, pattern drawings, text objects, and shapes 3D models, such as models of buildings or mechanical parts Construction drawings, such as drawings showing plans and specifications of buildings and mechanical parts Visualizations, such as animations of mechanical parts or 3D view of a CAD model AutoCAD is included as part of Autodesk's suite of software products that includes AutoCAD 360 and AutoCAD Map 3D. AutoCAD is also available for purchase as a stand-alone product. AutoCAD is available for Windows and macOS, and as a mobile app for iOS and Android. AutoCAD has also been ported to ARM architecture-based mobile devices, including Android and iOS. AutoCAD interfaces AutoCAD interfaces are available for: Windows: Desktop versions of AutoCAD Mobile: AutoCAD App for iOS and Android Web: AutoCAD Web App AutoCAD users access the program through a window with a visible title bar and system menu. AutoCAD has a number of system menus and dialog boxes that allow the user to access information and commands without having to search through the entire application. Pop-up menus provide the quickest access to various AutoCAD features, and windows and dialog boxes are used to interact with features such as display and measurement units, layers, and snapping. AutoCAD provides more sophisticated interaction controls for more powerful editing and annotation. AutoCAD workflow To create a drawing, AutoCAD's Drafting Workspace, users first create a drawing template, or base drawing, using the Drafting toolbar. Then users add layers to the drawing, arrange objects on each layer, adjust layer properties, lock or un-lock objects, and select objects to manipulate. If the drawing needs to be annotated, users can annotate the drawing. Drafting workspace Drafting workspace, shown on the left in the image below, provides an organized workspace for creating drawing templates. This workspace also provides an arrangement that is common to AutoCAD for windows-based users. To create a drawing template, users select

## What's New In AutoCAD?

Markup Import and Markup Assist introduces a new import type to AutoCAD that allows users to receive feedback from paper-printed or PDF documents and incorporate the changes directly into the drawing. With import type "Paper and file format," you can receive feedback from physical paper, a physical file that contains all of the drawing's data, or a PDF document that contains digital copies of the drawing or the drawings associated with it. You can import any type of file format that can be read by the CAD application, and you can import any type of paper document (for example, a printed paper, a PDF document, a file that contains all of the drawing's data, or a file that contains the digital copies of the drawing or associated drawings). The purpose of the Paper and File Format import type is to provide a simple, quick method of receiving feedback and incorporating it into your design. For example, you can bring a paper sample to your team for review, automatically create a paper file, and import the paper and file format from a physical paper document into the drawing. To import a feedback file using Paper and File Format import type, first, from the Insert tab, select "Paper and file format." A paper sample will automatically be inserted in the drawing, and the sample will automatically be saved to the drawing's file location. (The Paper and File Format import type assumes that the paper is scanned into the drawing as a default. If the paper is not scanned into the drawing, a new action is available on the Paper and File Format panel of the Insert tab—Insert Paper or File Import—to do so.) The paper is inserted, or the entire paper file is imported, in a specific place in the drawing: the bottom of the layout box. Note that the Paper and File Format import type supports importing a physical paper sample and a paper file into any drawing. So, you can place the sample in a particular place on the paper (for example, the bottom of the layout box) or import the entire paper file. The latter choice could be useful if you plan to import the paper file later, using the Change Drawings command. Next, select the import type "Paper and file format" on the Insert tab and choose the paper sample or file that you want to import. You can also select the data format of the file that you want to import. To use the Paper and File Format import type with an image file, click the
