AutoCAD has been available on Windows, macOS, Linux, Unix, Android, and iOS platforms since the program's release. The application is used by architects, engineers, drafters, and other types of professionals in the construction and other industries. AutoCAD has also been used to create "beautiful" maps and architectural plans. Being an older desktop app, AutoCAD may experience frequent crashes. These crashes have been reduced by updating the software to the most recent version, including AutoCAD 2018. On the other hand, AutoCAD 2018 also has some limitations, such as inability to use macros or design sheet templates. The latest versions of AutoCAD, including AutoCAD 2018, offer excellent performance. These new features and enhanced performance are a few reasons to update AutoCAD. However, there are other reasons you might want to consider. Before we discuss those reasons, let's examine the benefits of upgrading to the latest version of AutoCAD. Benefits of Upgrading to AutoCAD 2018 Autodesk officially released AutoCAD 2018 on June 27, 2018. The initial version of the application was available for the Windows operating system, but also supported macOS and Linux platforms. All three of these platforms will receive the latest version of AutoCAD in 2019. As a reminder, the Linux version of the application has been available since 2015. The official website of AutoCAD 2018 announced the following new features: Enhanced Functionality: The new release of AutoCAD 2018 brings new features and enhanced functions. These enhancements include a new UI (user interface), a cloud-based drawing and modeling application, a new UCS (Universal Coordinate System), and some other added features. Enhanced 3D Modeling Capabilities: A new feature in AutoCAD 2018 is the ability to create solid 3D models and easily generate 3D views. Previously, you had to use an external application, such as SOLIDWORKS, to create solid 3D models. The new release of AutoCAD 2018 brings this ability to the desktop app. In addition, the new release also includes a new function called Face Modeling. With this new feature, you can work on faces of solid 3D models in AutoCAD. This feature is also available in AutoCAD LT 2018, the AutoCAD version that runs on the Windows 10 operating system. by Microsoft Q: To prove the following statement Let H be the normal subgroup generated by $H \cap Z(G)$ in G and K be the normal subgroup generated by $K \cap Z(G)$ in G. Prove that H and K are both normal subgroups in G. A: Proof: Let H, K, N be normal subgroups in G. Let $x \in N$. Then Nx is a normal subgroup in G (why?), which contains the centre $Z(G)$. Hence $Z(G) \subset Nx$. Now consider $x \in H \cap Z(G)$. Then $x \in H$, so $x^{-1} \in H$ (why?). Hence $x^{-1} \in H \cap Z(G)$, and $x \in (H \cap Z(G))^{-1}$. Similarly, $x \in K \cap Z(G)$, so $x^{-1} \in K \cap Z(G)$ (why?) and $x \in (K \cap Z(G))^{-1}$. That is, $x^{-1} \in (H \cap Z(G))^{-1} \cap (K \cap Z(G))^{-1}$. Since the intersection of two normal subgroups of a group is normal, $H \cap Z(G)$ and $K \cap Z(G)$ are normal. This proves the first part. To show that H and K are normal, we have to show that any $g \in G$ can be written as $g = hk$ for some $h \in H$ and $k \in K$. Let $x = g \in G$. Then $x \in N$ (why?), which contains $Z(G)$ (why?), so $g \in Nx$. Hence $x = x^{-1} \in (Nx)^{-1}$ (why?). Since Nx is normal, $(Nx)^{-1} \subset N$ (why?). Similarly, $x \in H \cap Z(G$ a1d647c40b
