Image adjustments Before you work on your photos, you need to transform them from their original state. This means they need to be imported into Photoshop. If your photos are in the JPEG or TIFF format, you can use the "Unwrap Image" or "Unwrap" command and then import the photos directly. You can also add your photos to a RAW (covered in Chapter 14) or other archive format, as shown in Figure 16-1. **Figure 16-1:** To import a photo into Photoshop, right-click (Windows) or Control-click (Mac OS X) on the thumbnail and choose Open. Figure 16-1 shows that the file has the.psd extension. If you use the Photoshop Elements file-saving technique, you don't need to change

the extension. However, many Elements users like to keep their images in the.psd format because they can do more with it than other file types. If you have a memory card reader in your camera, you can import most JPEG and RAW images

Axillaries are anatomically located elastic ligament bundles of the fascial system connecting the chest wall to the thoracic spine. Injury to the axillaries has been known to cause significant post-traumatic morbidity and disability. In the literature, it was widely believed that injury to the axillaries cause thoracic outlet syndrome (TOS), the symptoms of which include neck pain, shoulder and back pain. Up until now, the pathophysiology of TOS remains controversial. The goal of this study was to assess the presence of any injury of the axillary system with the use of high-resolution multidetector computed tomography (MDCT) and magnetic resonance imaging (MRI) in patients with suspected post-traumatic pain

or neurological deficits of the upper extremities, and to relate the clinical findings with the anatomy. Twenty-six patients (17 female, 9 male) were enrolled in this prospective study. Inclusion criteria were a history of trauma at the axilla region and any of the following: (1) finding of tenderness on the axillary region in patients who had a trauma; (2) finding of nerve root compression or brachial plexus injury on MRI; (3) abnormal findings on MDCT. All patients underwent MDCT angiography of the upper and lower extremities and were evaluated clinically for the presence of symptoms and signs of TOS. MDCT and MRI findings showed that injury of the axillary system happened in seven patients, and in six, it was the only anatomical abnormality identified. Thoracic

outlet syndrome was diagnosed in five of these patients. Injury of the axillary system seems to be a frequent cause of TOS. Left ventricular ejection fraction measured by myocardial scintigraphy with ^{99m}Tc -HOPIO₃ in patients with idiopathic dilated cardiomyopathy. The aim of this study was to clarify the significance of the ejection fraction (EF) measured with ^{99m}Tc -HOPIO₃ in patients with idiopathic dilated cardiomyopathy. We measured the EF of 75 patients with idiopathic dilated cardiomyopathy, 22 with myocardial infarction and 11 with valvular heart disease. Myocardial scintigraphy with ^{99m}Tc -HOPIO₃ was performed. Myocardial clearance of ^{99m}Tc -HOPIO₃ was

What's New in the Adobe Photoshop 2021 (Version 22.4.3)?

As a parent of a 16-year-old, I can appreciate that when younger teens are young they don't understand the consequences of their actions. But that's another story. In a rather recent case of murder-suicide, a young boy in Indiana who was bullied was eventually driven to the brink of suicide, seemingly by the bully who called him queer, among other names. The boy, who was 16, killed his mother and then himself in a killing spree before the boy's body was discovered on a rural road on Tuesday. The boy's father had to notify the boy's high school at least three times before he was allowed to contact the boy. Police say that they've asked the school to arrange for the boy to transfer schools. But even though police say the death has been ruled a suicide, the boy's father

says he wishes he had been allowed to call the boy as soon as the boy went missing on Saturday afternoon. If the boy had been allowed to speak to his father, police say, perhaps they would have been alerted sooner and could have brought his mother home sooner and saved her life. “In a way, it really doesn’t make any difference if it was a suicide,” the boy’s father, Stephen McKinley Jr., told ABC7. “You know what I mean? It’s just a situation where I can feel better that you could have prevented his taking his mother’s life. That’s it.” “It’s a hard situation,” he continued. “And obviously, it’s a grieving time and we’re just trying to get through this. I’m just praying for the family.” A teacher at the high school where the boy attended reportedly informed police that she had been subjected to homophobic

name-calling, among other cruel remarks. The boy had been taken from the school on Friday after a student allegedly told school authorities the boy had attempted suicide and the boy had apparently cut off his penis, according to the boy's family. Here are some helpful tips on how to deal with a young, queer, bullying teen: Don't assume he's gay. While the boy told police he was attracted to girls and had "no sexual orientation" with regard to
