I'm working on a low current output on a project and I've come across a few cases where there is no need for a variable resistor. As a simple example I'd be using the Raspberry Pi to read sensors and control circuits based on a button press. The simplest setup would be: Battery -> Power supply (12v) -> Power supply (5v) -> GPIO pin When I tested this circuit I noticed it would often overheat because of the voltage mismatch and I realised that I could just connect the Power supply directly to the GPIO pin and still get the same functionality. I've seen it in other circuits like this one too. A single pot is used to provide gain for a circuit that needs little gain. What is the point of using a pot like this as opposed to a variable resistor (potentiometer)? A: "What is the point of using a pot like this as opposed to a variable resistor" It is not much of a point except that it is more simple to build. "single pot is used to provide gain for a circuit that needs little gain". Some circuits need less gain than other circuits. For instance, you might be powering a 1k resistor and it is doing fine. But you also might need to drive a 10k resistor with the same voltage. In the former case, using a single pot is fine, but in the latter, a single pot does nothing. "what is the point of using a pot like this" The point of a pot is that it can make a variable voltage out of a fixed one (1/10th of the input voltage), and it has a linear relationship to that variable voltage, which makes it easier to use than a resistor. Now let's say you use a 10k pot (or other nonlinear device) to drive a 1d647c40b

Big Fan "Big Fan" is a song written by American singer-songwriter Jack Johnson, released as the second single from his third studio album, Eye of the Storm (2008). Music video The music video for the song was directed by McG. It features Johnson on a large TV screen, surfing the internet with the video streaming from a web browser on the same screen. The video was made entirely using stock footage and effects, filmed by McG. B-sides The song's B-sides are "Faster Down", a cover of a track by Freedy Johnston; "Sick of You", a cover of the song "Sick of You" by Van Halen; and "Celebrity", a cover of the song "Celebrity" by the Bee Gees. Chart performance The song was a minor hit, becoming Johnson's tenth consecutive Top 10 hit on the Billboard Adult Contemporary chart, his second top ten on the Hot Adult Contemporary Tracks chart and reaching a peak of number four, his first top ten on the Billboard Mainstream Top 40 chart.
