In a single DNN project file, is it possible to define separate configurations for the following: A Dev environment A Staging environment A Production environment A: The build definition does not limit the number of Environments, it is limited to the number of Build targets. However, you can make use of Environment variables in the project. You can use this method as a quick fix to cover the cases that you want. You can set up your build definitions to have as many Build targets as you need. Source: A: It depends on your configuration but for most cases you can easily have as many as you want. You would set up separate configurations for each environment, then you could just set up separate targets to build
