Launch of AutoCAD in 1982 The software was immediately successful, and later that year AutoCAD was integrated into the AutoCAD LT DOS/386 and Windows versions of AutoCAD. In the 1990s, the software was ported to the Apple Macintosh platform, and the Windows-to-DOS platform conversion process was launched. Since then, a number of models have been released, including AutoCAD LT (for Windows), AutoCAD LT for Mac, AutoCAD LT for iOS, AutoCAD WS (for Windows), AutoCAD WS for Mac, AutoCAD WS for iOS, AutoCAD 360 Suite, and AutoCAD WS 360 Suite. Autodesk announced its intention to divest itself of the AutoCAD business on December 1, 2012. The company reported that the transaction would be completed by the end of 2012. Workflow tools include the Measurement Tool, which measures an object automatically. The Measuring Tool in AutoCAD lets the user input measurements on an object and can save them to a

text file. The Measuring Tool can be activated from the Calculate panel menu or from the Measure toolbox. IntelliCAD is AutoCAD's non-graphical user interface, which also includes an API to integrate third-party applications with the command line program. A similar product, with no functionality, is AutoCAD LT. Third-party vendors have also developed applications for AutoCAD. These include one that allows the import of SVG images, an image editor tool called MyImage, and apps such as the Autodesk Add-On for the AutoCAD Map 3D extension for Google Maps and Google Earth. This disclosure relates to a material dispersing device for mixing, dispersion or pulverization of powder. The pulverizing device according to the present invention is especially suitable for pulverizing metal powders, and is thus not limited to the pulverizing of metal powder, and can be used to pulverize a variety of materials. The pulverizing device according to the present invention can be widely used in the chemical, pharmaceutical, food, and other industrial fields. Dispersing devices, including centrifugal mills, planetary mills, and conical mills, are used to mix, pulverize or disperse powders. These conventional dispersing devices are not designed to pulverize metal powder. Referring to FIG. 6, a conventional metal powder pulverizing device includes a barrel 102. In the barrel 102, an inner cylinder 105, a rotor 106, and a drive device 107 are fixed together. When the drive device 107 rotates the rotor 106, an annular space between the inner cylinder 105 and the rotor 106 is filled with metal powder M, and the rotation of the inner cylinder 105 and the rotor 106 rotates the metal powder M in the annular space to achieve the effect of dispersion. After the metal powder is dispersed, water is sprayed into the barrel 102 to separate the powder, and the powder is then dropped out of the barrel 102 for further processing. The above-described metal powder pulverizing device is used to mix, pulverize or ca3bfb1094
