Keyboard shortcuts in AutoCAD AutoCAD is available in multiple editions, with versions for both general and specialised use. The two editions are AutoCAD LT and AutoCAD. AutoCAD LT, which is the standard version, has no cost, but is limited to approximately 75 objects in a drawing. AutoCAD LT is available for Microsoft Windows and Mac OS X operating systems. AutoCAD, which is more cost-effective and expands the number of objects to be drawn in a design, is the standard version of AutoCAD. AutoCAD is available for Microsoft Windows and Mac OS X operating systems. Keyboard shortcuts The short cut keys in AutoCAD are listed below. AutoCAD functions The functions of AutoCAD are listed below. Key Function Action Copy Copies a selected object. If a drawing contains multiple copies of the same object, AutoCAD will display a warning message stating that a new copy will be created. The user can then choose to continue or cancel the copy operation. Cut Selects a selection and places a copy of it. Exclude Allows the user to remove selected objects from the current drawing. Expand Expands an object. The object will expand if an object on which it is dependent is selected. Fold Folds an object. The object will fold if an object on which it is dependent is selected. Goto Displays a property sheet with the default values of the selected object. Hide Selects a selection of objects and removes them from the current drawing. Key Function Action Intersect Identifies objects intersecting the specified line or area. Introduce Selects an option, and displays a dialog box with the specified options. Invert Inverts the selection of a line or area. Join Joins the line segments and line loops of two or more objects. Layout Allows the user to rearrange the order in which objects are arranged on the screen. Lineweights Sets a width for the selected object. Match Properties Matches the properties of two or more objects. Measure Displays the properties of the selected object.

Legacy In 1995, Autodesk stopped selling the Workbench product line as a result of the release of AutoCAD 1998. AutoCAD 97 remained supported by Microsoft. In 1999, Autodesk released a Linux port of AutoCAD called Cedega, followed by a Windows port in 2001. Autodesk discontinued support for Cedega and the Linux AutoCAD product in 2012, and discontinued development of the Windows AutoCAD product in 2015. File format AutoCAD files are grouped into two types: DWG and DXF. DWG is a proprietary file format. Its name stands for "Drawing Workspace Format" and describes its file structure. It is more complex than DXF, and contains numerous keywords. It was introduced in AutoCAD release 16. It allows the user to customize many aspects of the document, such as image handling, font lists, text, colors, linetypes, etc. It has a layer system, allowing layers to contain blocks with individual attributes, such as color, linetype, lineweight, etc. The format is used to create the majority of AutoCAD drawings, and may also be used to create Word or Powerpoint documents with a layer system to produce complex graphical layouts. DWG can also include mathematical formulas. DXF is the native format of AutoCAD. It is a binary, text-based format. It has a simpler structure than DWG, and many of the AutoCAD options are either built-in or supported by predefined keywords. A DXF file contains only a single drawing. DXF was created by Acorn Computers Ltd. to replace its previous DGN format, which was a clone of the GE DGN format. The DXF format was adopted as a standard by CAD users. The IFC standard is a further extension of DXF. The files can be created directly in Autodesk's DesignCenter, or can be exported from a variety of products. Autodesk products and third-party software also create PDF files, which preserve the layout, but not the design. In 2015, Autodesk announced that it would stop supporting the DWG and DXF file formats, and will instead focus on native formats such as IFC, STL, ODB and CATIA. When AutoCAD 2.6 was released, the DXF format was replaced by the ACIS format, which is similar to ca3fbf1094

The objective was to investigate the association between parent's life-course socioeconomic position (SEP) and children's health-related quality of life (HRQOL) over a range of time periods and contexts. The data comprised two waves of a panel study of 2,035 families with a child aged 5-8 years and 1,520 families with a child aged 13-14 years (response rates: 84.5 and 74.4 per cent, respectively). The outcome was HRQOL as measured by parent proxy-report child health questionnaire (parent-report version of child health questionnaire and adolescent parent version). The main independent variable was parent's own lifetime SEP measured in childhood (age 0-16 years) and old age (age 43-64 years). Parental SEP was associated with children's HRQOL at all time points across the life-course for both sexes. Parental SEP measured in childhood and in old age was associated with children's HRQOL. Parental SEP in childhood was more strongly related to HRQOL for boys than for girls, and the gender difference was more pronounced in old age. The results showed that parental SEP in childhood and in old age is important for children's HRQOL. the physical reasons (at least for the $s=0s$ mode), so that one could not interpret the obtained results as the motion of a classical particle. In this respect, it is worth noting that a continuous quantum system, whose main characteristic is its wave function, has a maximum degree of freedom when the state vector represents the wave function of a one-dimensional "particle". In the present study, we tried to look at the simplest version
