In 2003, Autodesk acquired the leading competitor, Arup, and AutoCAD became a key product in the company's portfolio. In 2015, Autodesk acquired the leading Cloud collaboration provider, which was renamed to Classroom. Autodesk announced the integration of Classroom into AutoCAD in 2016. The software was available in a stand-alone product until 1985, when it was released as a part of the Add-In program. This was later released as the Autodesk Keynoter program in the late 1980s. The Keynoter program allowed users to drag and drop objects into the drawing canvas, and could be used to create graphs, charts and databases for presentations and reports. In 1998, AutoCAD LT was introduced as a scaled down version of AutoCAD. For the first time, AutoCAD LT became available on the PC platform. AutoCAD was previously available for the Apple Macintosh platform. Autodesk discontinued Apple Macintosh licensing on July 22, 2014, after 20 years of working with the Apple platform. In December 2017, Autodesk announced that they would discontinue the macOS version of AutoCAD by the end of 2018. Today, AutoCAD is used in diverse industries, including architecture, construction, engineering, automotive, manufacturing, and engineering simulation. AutoCAD is primarily used to create two-dimensional drawings and plans that describe the dimensions, position, and connectivity of an object or objects. It can also be used to create three-dimensional models. Autodesk's product line is organized around these two building blocks: Desktop CAD and Enterprise CAD. The software is used in numerous industries, including architecture, construction, engineering, automotive, manufacturing, and engineering simulation. AutoCAD is the most widely used CAD application in the world. The AutoCAD application has a broad range of tools for creating drawings including several programmable drawing commands, draw panels, an integrated text editor, and menus. The user interface is designed to help designers with drawing features like dimensioning, text, annotation, and layering. AutoCAD is often used as a post-processing step by the same people who created the original AutoCAD drawing. The AutoCAD model is transferred to another application such as Inventor or SolidWorks to create more complex drawings or assemblies. AutoCAD is also used by non-CAD people, and is used as a drawing tool for communicating engineering concepts.

An Old Thing — Will He/She Get Better? I was struck the other day by the seemingly futile endeavor to think about the future. As I was putting my son to bed at around 9:15, he asked “when will daddy leave?” I told him, it might be tomorrow, it might be next week, it might be the next day, but, what is sure, it won’t be in his lifetime. I was immediately struck with guilt. He had just asked me about my job. I told him, that I was a writer. That I write for a living. I told him I write about people and places he probably wouldn’t be able to see. And that I write about people from the past and the future. And that I write about people he might never meet. He looked up at me, his eyes full of compassion and understanding. He asked, “do you think they ever get better?” A week later, I was called for jury duty. There were just a couple of us, and as the case progressed, I was somewhat amazed at how many people came to testify. There were people who had been involved in the case 20 years earlier and their stories were still very much intact. A man who had been victimized by the accused. A woman who had been through several marriages and who talked about the red flags she had seen in her husband. A man who had been through the divorce and talked about the effects it had had on his ex-wife and how his daughters were directly affected. A

As a conventional automobile steering apparatus, there is one which is disclosed in Japanese Patent Unexamined Publication No. Sho. 57-164852. In this conventional automobile steering apparatus, a worm gear is rotatably connected with a steering shaft, a worm wheel is fixedly provided to the worm gear, a rack bar is rotatably provided to the worm wheel, a ball nut is rotatably supported on a ball bearing shaft which is fixed to the steering shaft, and a pinion gear is rotatably supported on the ball bearing shaft so as to be able to mesh with the worm wheel. In this conventional automobile steering apparatus, in order to reduce backlash, the ball bearing shaft is twisted in two directions so as to incline an axis of the ball bearing shaft with respect to a steering shaft axis direction. Since this conventional automobile steering apparatus requires the ball bearing shaft to be twisted in two directions, it is necessary to use a ball bearing having two balls. Moreover, since the ball bearing shaft is twisted in two directions, a large axial load is exerted on the ball bearing. As a result, in a case of a dual ball bearing, the load of one of the ball bearings is increased and a friction between the balls becomes large, so that a lifespan of the ball bearing is reduced. Furthermore, the structure of the ball bearing is complicated, and a manufacturing cost thereof is increased.

Characterization of noroviruses in patients with acute gastroenteritis in Turkey. Although noroviruses are the leading cause of acute gastroenteritis, the incidence, prevalence and serotypes of noroviruses are still poorly understood. The present study was conducted to determine the prevalence, the genotypes and the prevalence of GII.4 genotype in Turkish children with acute gastroenteritis. A total of 1076 stool specimens were collected from children with acute gastroenteritis between January and June 2009. The stools were analysed for the presence of norovirus, rotavirus and enteric adenovirus. The RNA of these viruses was extracted from the stools and the detection and genotyping was performed by reverse-transcription polymerase chain reaction and direct sequencing. The
