## **AutoCAD [April-2022]**

The command language (AutoLISP) is an extension to C/C++, Smalltalk and Java. The programming language is very similar to BASIC, but with some differences. AutoLISP is usually used for automation. Since the first release of AutoLISP in 1986,

it has been backward compatible. It is officially supported by Autodesk, but is also supported in some older software packages, such as, for example, OmniGraffle. AutoLISP is used in Caddx for parametric editing and programming, particularly for CAD. Visual LISP is an extension of LISP. Some CAD vendors adopted LISP and Visual LISP as their application programming interface. An example of this is WINLISP, which was used in AutoCAD applications. Visual Basic for Applications (VBA) is a programming language, which is used with Microsoft Office, and its successors such as Microsoft Office 365 and Microsoft Office 2019. The programming language is designed for the development of applications that are used in the Microsoft Office suite. In AutoCAD, it is used for programming parts of the software and for customizing some features of AutoCAD, such as dynamic behavior of the grips and the text label editor, tool bar options, and others. VBA is used in AutoCAD for: 1D drawing - applying attributes of parts, text labels, custom parts, editing and editing the drawing process 2D drawing - generating and editing features such as line, arc, ellipse, rectangle, polyline and spline, drafting and editing the 3D drawing process, managing data and project information, and checking and scheduling printing 3D drawing - generating and editing features such as polygonal surface, polyhedral surface, surface, surface contour, solid models, project and part information, and tool palettes parts and drawings - generating project parts, importing and exporting parts tools and features - creating, editing, managing and applying tools functions - applying custom function, editing the built-in functions, creating custom functions and macros, and applying custom functions objects and components - creating objects, converting them into components, editing components, and managing component information. Part exchange format, a binary format for exchanging the data of part definitions. This is one of the supported file types for the PostScript e-mail printing. ### What's New in the AutoCAD?

Add and track version history to your drawings. You can now use the Command | Version History menu to keep track of modifications to a drawing. (video: 1:13 min.) You can add comments to individual lines, blocks, and comments, by pressing Shift + Option + 1 (Alt + F1) to add a comment. (video: 1:05 min.) Receive one-click comments on blocks and lines in your drawing when you mouse over them. A new drawing tool, the Markup Assist tool, allows you to insert comments or show your drawings in a separate window without overwriting your drawing. (video: 0:59 min.) Updates to features that are already released in AutoCAD 2018. Enhanced Search: Search drawing files for tags or keywords and filter results based on the parameters you set. Filter drawing files by drawing type, tag, owner, drawing creation date, version, and drawing path. CAD Command Text Viewer: Find a command in the command list and quickly find its functionality. Make your own Model 2D drawings: Convert drawings created in AutoCAD Designer 2019 into 2D drawings for use in AutoCAD. Enhanced Shape Creation: Easily create and edit freeform arcs and freeform arcs with offset. Shape and freeform arc offset drawing effects are now more responsive. New roundline style: Create a new roundline style for tracking large-scale curvature. The roundline style can be applied to points, arcs, and spline segments. Color management: With the new Color Management toolset, AutoCAD now automatically converts colors from a CMYK to RGB color space when you open a drawing.
