BioTime is a powerful web-based time and attendance management software that allows. The web-based time and attendance system lets the users to monitorÂ .Q: How do I know if my value is empty or not when I only have a reference? I have a private variable, this one will represent a User and it will only ever hold the reference of a User, I mean, the User must never be modified from the variable. So I have this value but I would like to know if the user reference that is inside of this variable is empty. So far I do this: if(user == null) throw new Exception("No user defined!"); But if I don't have the user inside of a variable and I only have the reference, how do I know if it is empty? A: You can use the SafeDangerousCast method if (user!= null &&!user.Equals(default(User))) { // Do something } A: You can use "null" as a default value for your private variable and then check if it's null or not. If it's null, then it means there is no value inside the reference variable. private User user; public void SomeMethod() { if(user == null) throw new Exception("No user defined!"); //Use the variable } A: If you have a variable and a public variable that is like this: public class Class { public string PublicVariable; private string PrivateVariable = null; public Class() { PrivateVariable = PublicVariable; } } You can easily call this method: public static
