"Last year, we created a new engine, the FIFA NextGen Engine, which provided the foundation for some of the most significant advancements that we have made with FIFA Interactive. I'm proud of this year's iteration, because it is more intelligent, authentic, sophisticated, visceral and authentic than before," said Oliver Martin, Creative Director at EA SPORTS. "Players now feel better and behave more realistically, and in the coming weeks we'll have a lot more to share about our technology and our new worlds and features." FIFA 22 introduces a range of innovations to make the fast paced action of world class football more realistic and enjoyable. Key new features include Enhanced Player Positioning, Tackling and Interception Control, Tactical Free Kicks, Control Overrides and a range of new camera and ball physics. FIFA 22 enhances player positioning with full-body physics, improved player collision detection, and more realistic player animations that make players react naturally to contact. New control over personal, tactical and free kicks enables fans to control the flow of the game and dictate their own style of play. Tactical free kicks work alongside new goal-line technology, providing fans with both entertaining goalscoring opportunities and in-game tactics. There are new locations and atmospheric lighting on pitch. These dramatically enhance the visual experience by bringing the stadiums, player gear and surroundings to life. "FIFA 22 offers more realistic ball physics and improved ball possession. Fans can now see how many touches a team has on the ball in tactical or free kick situations, and we have a number of other changes that will help enhance the game play experience," said Steve Perلمان, Executive Producer of FIFA. "For players, we have a number of new animations and we have a number of things for fans to do while watching matches." FIFA 22 also introduces new visual upgrades for stadiums, players and crowd scenes that offers players and fans a much more immersive experience. The scope of in-game action has been enhanced for more authentic and realistic player movement, and photorealistic crowds and players have been captured in motion-capture technology to immerse fans in the action. FIFA 22 includes a selection of new camera moves, including 360 degree cameras that are controlled using head gestures. The camera can be used to peer around any area of the stadium to see the action from any angle, and to watch matches in stunning real-

FIFA is a football video game series published and sold by Electronic Arts. It was created in 1988 by SEGA and was developed for their Mega Drive console and then also released for the Master System and Genesis/Megadrive. EA Sports has released several FIFA games through the years and have also released spin off games under the FIFA name. In all sports games released under the FIFA name, they have started out with football, and then have moved on to other sports. In FIFA games, teams are controlled by players, and players are controlled by players. Games are released yearly, and generally have major changes that occur throughout the year. What is Football? Football is a sport that has many different rules and what happens and why varies from country to country. In the sport of football, the best player on the team is usually decided by the crowd (through cheering), and that player then gets to get the ball and run it downfield (that player is called the playmaker). During the run-downfield players in the game are still allowed to use the 'Away Ball Control' ability, to bring the ball back to the field, so long as the ball is still in play. Once it is out of play, the player cannot do anything with it. Not all football games use this ability, but it is in this series of games. What is the gameplay of a FIFA game? The gameplay of FIFA is governed by 4 things: Players, Opponents, Rules of the Game, and Where the Game is Played. Most of the gameplay revolves around the 'Players' and 'opponents' and how they change through a season. Many of the gameplay features are governed by the Rules of the Game, but each game has its own rules and these should be read carefully to know how the game should be played. What are the essentials of gameplay? There are 4 essentials of gameplay that you must have in a video game. They are 'GoalKeeper', 'Away Ball Control', 'Attacking', and 'Defending'. Goalkeepers are the player on the field that can save a goal from being scored. They will do this by blocking the ball with their arm (or a part of their body). As long as they don't get 'Away Ball Control', the team controlling the ball will be allowed to keep it. If they get 'Away Ball Control' they will return the ball to the field by 'Going Forward'. Efforts to prevent HIV-associated bacterial infections are important in resource-poor settings, but whether prophylaxis is effective is unknown, particularly in Asia. To examine the effect of antiretroviral prophylaxis on the incidence of serious bacterial infections (SBIs), and to identify subgroups of patients that benefit most from prophylaxis. We searched the Cochrane Central Register of Controlled Trials, Medline, Embase, CENTRAL, China National Knowledge Infrastructure, Wanfang database, and Chinese Biomedical Literature Database. The meta-analysis was conducted by using RevMan 5.1. Five randomized controlled trials evaluating antiretroviral prophylaxis for SBI in HIV-infected adults were identified. The

FIFA is the most popular videogame series in the world, and millions of people play FIFA every day. The gameplay innovations in FIFA 21 show the direction the industry is headed, and FIFA is the most realistic and authentic football game on the market. FIFA 21 is an all-new game. It embodies a powerful line of play, built on the foundation of exciting new features that make the most authentic football experience possible: the all-new Focus mode, brand-new Master League, and a brand-new player management system. FIFA 22 focuses on tactical intelligence and ball control. We break the game into four key gameplay elements: Game Intelligence, Physical Play, Teamwork, and Ball Control. You'll also be able to use it to play online, competing against the most skilled and talented players in the world in a fun and easy to use platform. Football Has Never Been Simpler Football has never been played so intuitively, so strategically, or so physically. Built around the new physics engine and its ability to react directly to the player's physical actions, FIFA's new player models and animations make ball-control and thinking on the pitch even more tangible than ever before. Ball-control is one of the game's greatest strengths. The ball simply sticks to your player, and decisions like when and where to dribble or pass get made instantly. It's what makes FIFA's game the most real and intense football experience available. A brand-new system called Pre-Transfer Matchday puts players and clubs on the same playing field. A multitude of new items, options and tools allow you to make the most competitive transfer decisions. Every player on the pitch has his own free-kick routine, and they all have individual post-save targets to aim for. All of this combined with improved AI for teams, better defence and smarter tactics give you unprecedented control of tactics and strategy. And while the game remains packed with never-before-seen enhancements to Ultimate Team, we've also made major improvements to our online experience. We've added new content and functionality to online matchmaking, improved connections, streamlined online lobbies, and made millions of online passes instantly available to all players. Make the Perfect Pass FIFA 22 brings an improved Real Player Motion (RPM) engine to the pitch. In real-life the players
