I've said it before and I'll say it again, the Nintendo Wii is the biggest piece of shit gaming system I've ever seen. Sure, it had a lot of potential, but it blew that potential out of the water before it got off the ground. There were many reasons why the system failed: the Internet connection system was too slow, the biggest disaster was the lack of games for the system, and the worst was the fact that Nintendo stopped making games for the system before the system actually took off. Now we are fast-approaching the fourth anniversary of the system and Nintendo is starting to get the ball rolling again with the Wii U. The system is a console that feels so amazing in many ways but looks so horrible in so many other ways. This is a console that was designed to make watching videos and playing games on your television look a little more comfortable and to add a lot of new games to the current lineup. The problem is that Nintendo's efforts to revamp the system

are failing. Here are a few things you should know about the Wii U: -It looks like nothing more than a tablet -It runs an off-the-shelf version of Windows 7 that runs like a dog -No useful online functionality -The games aren't really that exciting for the most part -A variety of games are priced way too high for what they're worth -Games not available for the system have to be downloaded from the Nintendo eShop -The eShop is slow and not at all intuitive to use -The menus and all of the software for the system are written in Japanese -The system's battery life is short -Nintendo tried to create a new video game controller for the system called the Wii U Pro Controller -They tried so hard to make the controller look and feel just like the Xbox 360 or PS3 controller, but they failed -The Wii U GamePad doesn't work very well as a game controller -The GamePad doesn't have an analog stick -The GamePad doesn't have triggers or a D-pad -The GamePad doesn't have a button for skipping backward or forward on DVDs -The GamePad doesn't have any buttons for surfing the web or controlling the system's software -The GamePad doesn't have a microphone -In order
