Bitmex is a cryptocurrency to cryptocurrency exchange. The project is based in Luxembourg and the homepage is available in English, French and Dutch. Official Website: You will have to submit your personal details in order to open an account, however they will then have to provide feedback on the quality of their services. Bitmex is incredibly important for traders who would like to trade cryptocurrency against other cryptocurrencies. All you need to do is select what type of exchange you would like to start out. You can either get yourself a starter package that includes forex or fx options or a cryptocurrency to cryptocurrency exchange. Why is Bitmex so important? Bitmex is a very important exchange because they offer traders a lot of flexibility for trading. A very big thing you need to know about Bitmex is that they have the lowest margin trading for the exact same leverage of 80:1. This makes it the safest place to do your trading because it is very stable. A lot of people also like to do their trading during the weekends. Many reasons for this include the lower traffic volume on the weekdays. It is important to know that Bitmex cannot send or receive emails, they need to rely on users to contact you. Also, you will need to provide the company with information about your phone number in order to be able to receive phone calls from them. In the case of Bitmex you will need to provide your phone number to be able to contact you. Many people do not like giving this out because of the constant spam calls. It can seem really bad to sign up for free if this is the case. Bitmex, however, is really strict when it comes to spamming people. The better service providers should also be able to keep any spam going to a minimum because it is their main source of income. 8 Best PAID Survey Sites of 2019 Hey Friends! Ximagic GrayDither

Ximagic GrayDither is a powerful graphic plugin that integrates with various photo editors and can help you control the conversion of images to grayscale. Most editors do not offer advanced options when turning pictures to gray tones, resulting in low quality images, with distorted light levels. Convert to grayscale or reduce color Ximagic GrayDither offers you advanced, multi-level dithering options for turning a colored image to black and white or reducing the color saturation. For example, you can turn any raster image into a black and white bitmap pictures with 2-level grayscale. The plugin allows you to apply one of the several automatic conversion methods, based on input settings. Thus, you may set the colorspace: RGB, CIELab or YCbCr, or adjust the tone level. A low tones' level indicates increased sharpness, while high levels allow you to remove the noise in the images. Dithering patterns and error control Ximagic GrayDither allows you to set the dithering method - random or patterned process. You may select one of the fixed patterns, import a custom one or define new parameters on the spot. Moreover, the error dithering can be controlled by setting the propagation percentage, method and queue size. The supported error dithering methods include Riemersma, for space filling curve and Ulichney, Floyd-Steinberg, Jarvis or Sierra for the array type. Moreover, you can enable the post processing, in order to use the direct binary search (DBS). The plugin features a preview area, in which a segment of the picture is displayed in full size. You may easily switch between the original and filtered pictures, in order to observe the changes, as well as zoom in on the image.
