"We are looking at all of our facilities and the best ways to help those facilities meet the needs of our patients," said Craig Ackerman, Intermountain's chief executive officer. "We're also making sure that we have the right facilities in the right places to help our providers help our patients." The documents show that the hospital has been asking its board of trustees to approve the possible expansions

Calcular Hoy r/Calculo Campamento Matricial.[Effects of the NO-synthase inhibitor, NG-nitro-L-arginine methyl ester, on selected circulatory parameters in the control and spinal cord injured rats]. Experiments on a spinal cord injury (SCI) model have shown that the nitric oxide (NO) causes cardiac dysfunction. The aim of the present work was to study the impact of administration of NG-nitro-L-arginine methyl ester (L-NAME), a NO-synthase inhibitor, on the systemic blood flow, cardiac function, and haemodynamics in the control and SCI rats. Rats received 30 mg/kg/day L-NAME by intraperitoneal injection for 14 days. After 21 days of the drug administration, the SCI was induced by a brief impact of a mechanical injury of the spinal cord on the the spinal cord impactor. The blood flow measurements in the left ventricle and in the femoral vessels were performed after injecting the radio-isotope, 3H-labeled microspheres, and light emission of the fluorescein isothiocyanate was used to determine the myocardial contractility indices (pressure-volume ratio, and pressure half time of the contraction). The SCI reduced the blood flow in the femoral artery by 20% and in the left ventricle by 47% in comparison to the sham-operated rats (p
