Photoshop CS6 is the sixth major version of Photoshop. It might seem strange that an industry standard product would have a minor revision as a "major version number." As you've probably discovered when you've looked at your computer screen, programs don't always do exactly what they should, and have some issues. Every now and then we have to fix those issues and make small, incremental changes to accommodate them. Photoshop has had six major version numbers since it was first released. When customers are told that Photoshop will run on a particular piece of equipment, they generally expect to be able to buy a disc that will install the software on that equipment.

Brightness enhancement in a gain-guided multimode laser diode by use of a diffraction grating. We report on a simple method of direct and selective amplification of a specific mode in a multimode laser diode (LD) by use of a conventional diffraction grating and a gain-guided fundamental LD operating at a wavelength of 1.55 microm. By use of a diffraction grating, the wavelength of the generated laser in a specific mode can be shifted by setting the grating pitch and the angle of the incident light. A conventional LD is amplified to achieve the necessary laser power by use of the grating-mode-selected, fundamental LD. Q: Regular expression for eliminating special characters from input text I need to write a regular expression in PHP which will reject special characters from the input text. I have tried `/^[A-Za-z0-9!@#%&*'(){}-]+/` but it does not work. Expected Output: Input text: `$_POST['@tea*'];` // output 123 A: `/^[^\\w{space}!@#%&*'()-]/` The `\w` and `\s` characters can be used to match word characters and "non-word" characters, i.e. all characters which are not either letters, digits or whitespace. A: In addition to the `\w` or `\s` you could add `@` and `^` as below: `$test = $_POST['@tea$@']; preg_match('/^[^@\\w\\s]/', $test); // $result = false` Read more about Regular Expression here and here. A: You have the correct idea with the `\w`. However, here's an example of how you can perform more complex checking on the input, if needed. `!&!*!'!^'(; if(isset($_POST['text'])) { $text = $_POST['text']; // Catch special characters $filter = preg`

[Etiology and clinical features of allergic rhinitis]. Allergic rhinitis can be regarded as the most frequent allergic disease in industrialized countries. However, the diagnosis of allergic rhinitis represents a methodological challenge to the clinician. Routine laboratory examinations, including a thorough history and physical examination, are the prerequisites for a precise diagnosis. In the case of an allergic diagnosis, the differential diagnosis of allergic rhinitis includes rhinitis due to medication, late phase reactions (e.g. food-induced rhinitis), and pseudoallergens and commonly occurring non-allergic rhinitis. Anamnesis, history, and physical examination are again mandatory to rule out an infectious etiology, e.g. upper airway infections. The identification of causative allergens is often difficult, but the skin prick test or skin, blood, and s-IgE testing allow the most precise characterization of the allergic inflammation. In contrast, the diagnosis of non-allergic rhinitis is a diagnostic challenge. The diagnosis of non-allergic rhinitis should be made on a case-by-case basis.
