I have not played it (though I'd like to), but I read a review where the reviewer had no intention of finishing the game after playing the first few hours, just so that he could see what the game was about. There is no denying that Deep Sleep is a very serious game; it draws a lot of its atmosphere from its setting, and a lot of the gameplay mechanics from the tropes of classic horror and fantasy. ReviewsThe Deep Sleep trilogy accomplishes much that so many paid and even big-budget games fail to achieve, its intensely foreboding atmosphere chief among them.Gold Plated GamesEverything is surreal and disorienting, thus perfectly capturing the dreamlike texture of the setting.Rock Paper ShotgunGameplay Deep Sleep Trilogy: I have not played it (though I'd like to), but I read a review where the reviewer had no intention of finishing the game after playing the first few hours, just so that he could see what the game was about. There is no denying that Deep Sleep is a very serious game; it draws a lot of its atmosphere from its setting, and a lot of the gameplay mechanics from the tropes of classic horror and fantasy. It is both tense and creepy. You spend an awful lot of time in the dark, and it has a pervasive atmosphere of dread and danger. It makes a lot of use of the ambient sound design as well. I highly recommend the Deep Sleep Trilogy for anyone interested in a bit of video game storytelling, it is very well done. Related Injuries You're cruising along the highway and just as you take your foot off the gas pedal, you hear a loud explosion and see a fireball. Call 911, get out of your vehicle and then check yourself for injuries. Blast-Related Injuries May Include the Following: Head, scalp and neck injuries Nausea and vomiting Headaches Severe pain and burning in the eyes Memory problems Facial injuries such as lacerations and cuts Pinpoint burns on the skin Facial fractures or bruises Broken bones or internal bleeding In severe cases, particularly with someone under age 16, blast-related injuries may include the following: How do children receive these injuries? The biggest risk during a blast is getting hit. While children aren't directly hit by the explosion, they may be injured by flying debris or by projectiles from the concussion that accompanies the blast. Children also are subject to secondary injuries. They breathe in toxic dust and may get hot at the time of the blast and then become chilled. In addition, their muscles are often not as well developed as an adult's and they may

receive more impact from the blast. Why should you take precautions if you live in an area where explosions are possible? When you hear an explosion, take cover. While the explosion itself may not be harmful, the materials inside the blast are more dangerous than the explosion itself. Many explosives can be used to make an improvised explosive device (IED), which is used to cause a blast injury. Therefore, it's important to exercise caution when near explosives. Construction sites are dangerous areas because they often have multiple people driving in close proximity. Children may be playing with explosives. If you have a history of lung problems, such as asthma or emphysema, get medical assistance immediately. Taking appropriate precautions may help you to avoid injury or death. Facts about biological agents The Army Medical Department defines biological agents as pathogens or toxins that can be spread from one person to another. Many different biological agents exist.
