I have this list of dates for each file: 04-21-2012 04-29-2012 06-16-2012 06-18-2012 Is there a way to search for files that have been modified today? A: You can use the find command. find -mtime(0) This would match all files that have been modified in the past and output a list of the files it matches A: The Date is in a Date-Time string so you can only compare the times: for i in `ls`; do date -d "\$i" +%s > mtime if [`date -d "\$i" +%s` -gt `date -d monday +%s`]; then echo "\$i" fi done All files that are newer than monday are printed. You can use any weekday that works for you. You can also use the time function to compare only the times. [The effects of acupuncture and moxibustion on lung diseases]. Lung diseases are very common and serious worldwide and acupuncture and moxibustion are some of the most widely used traditional Chinese medicine therapies. This paper reviews the recent research that demonstrates the effects of acupuncture and moxibustion on asthma, chronic obstructive pulmonary disease (COPD), acute respiratory distress syndrome (ARDS) and lung injury. These studies indicate that acupuncture and moxibustion may be used to treat asthma, COPD, ARDS and lung injury."In this world nothing can be said to af5dca3d97

Go back to the activation panel and click on "Activate" then it should be activated. 1. Field of the Invention The present invention relates to apparatus for applying liquid to a substrate and, more particularly, to a drying apparatus which can be used in a processing chamber for applying liquid to a substrate. 2. Description of the Related Art Semiconductor devices are widely used in electronic devices, such as computers. However, when a semiconductor device is fabricated on a wafer, the fabrication process often requires the application of liquid (for example, a chemical solution or a photoresist material) to the wafer. If the liquid is not applied correctly to the wafer, the semiconductor device could be adversely affected. The wafers are typically located in a wafer cassette and the cassette is placed into a processing chamber. The processing chamber typically includes an upper chamber lid which is secured to the upper portion of the processing chamber and a lower chamber lid which is secured to the lower portion of the processing chamber. The wafer cassette is located between the chamber lids. A robot arm is located in the lower chamber lid and transfers wafers into and out of the wafer cassette. The robot arm has grippers for gripping the wafers and a wafer handling mechanism which transfers the wafers to the robot arm. After the wafers are placed in the wafer cassette, the robot arm brings the wafer cassette to the processing chamber. The chamber lids are closed, the processing chamber is evacuated and the vacuum pump exhausts any gasses. The robot arm then transfers a predetermined number of wafers from the wafer cassette to the processing chamber. The robot arm also inserts the wafers into a carrier which is a holding device for the wafers. The robot arm then withdraws the wafers from the carrier and places them on a wafer

It was a day of the year we rarely see: rainy, gray, dreary - and no-one was complaining. For 29 days of the year, a cold front off of the west coast of Australia pushes moist air over Victoria and Tasmania and out to sea, creating one of the most spectacular displays of cloud and lightning you'll ever see - a sight more rare than unicorns. But this week, the sky was nearly empty, the day was quiet and nothing could cheer us up. Sunday saw a few clouds, but only scattered, nothing that could be called impressive. And then, the storms started. Just after 10am, on a sunny, humid morning, a cool front pushed over Victoria and Tasmania, bringing with it a driving rain. By the time it reached the coastline, it was grey, and wet, and driving. There was a warning that thunderstorms were coming, but none of the stations forecast any strong winds, or torrential downpours. "At the time, I said this is probably the worst day of the year for downpours in Melbourne," said Melbourne's John Madigan, who runs Weather Snap, which tracks Melbourne weather on the daily. "And that's what we got. A poor, drizzling rain that
