A new 4-benzoylthiosemicarbazide is designed as a prodrug-like prothyroxin bioconversion product. It undergoes rapid formation of the active species, thiosemicarbazone, in vivo. The bioconversion of this prodrug to thiosemicarbazone is monitored by a simple and convenient spectrophotometric assay. In the presence of microsomal enzymes (cytochrome P-450 and alcohol dehydrogenase), the 4-benzoylthiosemicarbazide is bioconverted to a thiosemicarbazone derivative (high-performance liquid chromatography method). In the presence of the latter, the prodrug is converted to the thiosemicarbazone in a time-dependent manner. The large differences in the rate and extent of formation of the thiosemicarbazone in the presence of the different enzymes allow for detection of the microsomal activity of the enzymes in different tissues.Q: difficulty reading and parsing xml in java I am trying to read the following example xml from a txt file and convert it to a
