## Line 6 Pod Farm 25 Platinum Crack Windows 13 !!HOT!!

i run into the same issues as you on my system. its also a native 64 bit version. however, i also have the same cards and power supply you do, and ive also realized it also has to do with processor speed. the nvidia drivers require a specific number of processor cycles to make a calculation, and if you run it on a faster processor, the calculation happens a lot faster and pro tools doesn't like it. conversely, if you run it on a slower processor, the calculation takes longer and pro tools has a better time of it. i was thinking of going to a core i7 to see if that would make a difference. regardless, i would recommend getting a new computer and doing the following: get a second monitor. get a good audio interface, preferably one that has a tape line option like focusrite or possibly uad, and a good usb audio interface. get four hard drives. get a good quality power supply. best of all, get an ssd for pro tools only. that way you can very quickly and easily upgrade the system whenever you feel like it, and not have to worry about losing data. while there isn't a ton of difference between the two processors, there is, and you won't know unless you test it out. i highly recommend getting the best you can afford. it sounds like you've got a very capable machine (all things considered) that's not slowing you down. tried to find this info on your system but get an error on your site.. i have a 6core amd 3800 it's a pretty decent system (after problems with my new system, i know everything is not a cookie cutter system). for what i use it has been a real work horse, but it's just too much for my current system, and i would be happy to have a faster more efficient system. i remember reading a post on this site by someone or some system about benchmarking the 3800 vs 3000 and the results were so overwhelming that all you really need to do is go to cpuz or speedfan and the 3800 is fully out performing the 3000 regardless of the software that is being used. sorry for the long post, i know you are probably busy and i hope someone has some input for me about this. would be glad to know
