#un dia sin mexicanos. un dia sin mexicanos esta en la lista de libros de texto español.

q: elements of a polynomial ideals are algebraic numbers let \mathcal{R} be a ufd and $\mathcal{R}[x]$ be the ring of polynomials in x with coefficients in \mathcal{R} . suppose $p(x)$ and $q(x)$ are polynomials with coefficients in \mathcal{R} such that $p(x) \mid q(x)$. show that the elements of the fraction field $\mathbb{Q}(x)$ of $\mathcal{R}[x]$ are algebraic numbers. i know that i have to use the equivalence of the fractions $\frac{p(x)}{q(x)}$ and $\frac{p(x)}{p(x)q(x)}$ where $p(x)$ and $q(x)$ are polynomials with coefficients in \mathcal{R} , but i have no idea how to apply that.

a: let \mathcal{Q} be the set of all $p(x)/q(x)$ where $p(x)$ and $q(x)$ are polynomials with coefficients in \mathcal{R} . it is enough to show that $p(x)/q(x)$ is an algebraic number iff $p(x)$ and $q(x)$ are both constant. suppose first $p(x)/q(x) = a/b$ where a and b are both constant polynomials with coefficients in \mathcal{R} . then $p(x) = aq(x)$ and $q(x) = bp(x)$. since \mathcal{R} is a ufd, the polynomials a and b are relatively prime (i.e. $\gcd(a,b) = 1$). therefore, the polynomials a and b are both constant. conversely, suppose $p(x)$ and $q(x)$ are both constant polynomials with coefficients in \mathcal{R} . then $p(x)/q(x)$ is an algebraic number.

q: android viewpager not displaying correctly when setting colors programatically i've been using viewpager for a while without any problems. but when i try to set the background for the pager item, the pager shows a weird background color and the title/text is not visible. the code for

```
setting the color is in onCreate(): public class mypageradapter
    extends pageradapter { private context context; public
mypageradapter(context context) { this.context = context; }
@Override public object instantiateitem(viewgroup container,
    int position) { view v = null; layoutinflater inflater =
(layoutinflater) context.getSystemService(context. 5ec8ef588b
```
