
USB Rufus V3.8 Final ##VERIFIED##

Rufus is a tool for Windows that allows you to create several different types of bootable devices from external drives such as a USB stick, disks and SD cards. It also allows you to create a boot disk for Windows and Linux. If you want to install Linux on your computer and not on a USB stick, you don't need to install anything else except for Rufus. You can use it to install Linux on another computer. You can use Rufus to boot from Linux on a USB stick. It is the perfect tool for system backup and restore. In addition, you can download applications as a disk image.
