I was fortunate enough to receive Photoshop CC a while back as a free upgrade on my Mac, and boy what a gift it was! In the past, the digital painting and drawing tools found in Photoshop Elements and Lightroom were enough for most users — but now Photoshop has matured to the point where even professional photographers need the extra power that Lightroom has. This new version of Photoshop has updated and is now faster than ever. The quality of the illustrations and retouching tools alone are worth the upgrade. The power of a Creative Suite is directly tied to your hardware, however, and if you're a light user, upgrading to the latest version of Photoshop CC is probably not going to provide you with the performance you need. If you're looking for a faster workflow, then Lightroom CC is probably the better application to add to your bread-and-butter, so you won't have to worry so much about your keyboard shortcuts for instance, and you'll get much better performance. This update is quite interesting. The new CS6 update has a new interface, and there is a new lineup of new Creative Suite Software. There is a new feature called 3D content creation, new Instagram-like filters, and Adobe has included a new camera utility program called the Lightroom mobile app. The features are quite interesting, but the updates aren't all perfect; especially in regards to the browser speed. The new Photoshop is loaded with features, including a “Retouch the Highlights tool” that makes it easy to retouch the areas that are well exposed as if the photo had been shot with a flash.
