One of the most useful features in Lightroom 5 is also how easy it is to create photos. You can now use a preview of your photo right on the Camera Raw Sidecar window. To help you conform to your editing, you merely click on a stored selection, and the preview will instantly update. And it's not just for photos as the same exact logic can be applied to every graphic and layer that you might have created. The preview also lends itself to a cloned copy of your original photo, and you can even make a copy of *itself* as a new image and add it as a layer underneath any picture, which would be ideal for adding custom effects or modifying the cloned image. Photoshop should be taking a lesson from this. While writing this review the latest version 5.2 of Adobe Photoshop for Windows was released no final release of Photoshop for Linux has been made. Those who read my previous (free resize-rotate) review and may try Lightroom, should stay away from Photoshop, since that is not a Microsoft program. As I say in most of these reviews, I'm a big fan of Photoshop. It is the granddaddy of all photo editing programs and remains as one of my favorites. But every once in a while Adobe releases a new version that I go, "Hey, wait a minute!" Well, that is my reaction to Photoshop-Elements 12. And because I do most of my work in the cloud with Photoshop.com - and because I currently use the new Adobe Photoshop Creative Cloud service - that's why I feel compelled to write this review of Adobe Photoshop Elements 12.

New ND (Negative density) Filters — Oddly enough, it's still a relatively new filter to Photoshop, which is fixed when you're working with high-dynamic-range (HDR) images. Now, the ND Filters promise to catch the eye and give you the perfect look. New Lens Correction filters — In any case, "Lens Correction" have become one of the most desired filters. These filters will make your images appear more natural and help you achieve the results that fit your artistic vision. Reverse, Fade, and Watermark Effects in Photoshop - The Reverse effect is applied only to the area in which you click. So you can avoid those unwanted effects such as 'watermark' and 'scratch'. 'Fade' is used to change the intensity of color. And also, if water is applied to the original image, this effect won't be erased. iAutoWB is a photo-editing app that uses artificial intelligence and machine learning to automatically correct lens vignette (unwanted halo and shading) related to a camera's chosen lens profile. As great as the creative community is, sometimes we lag behind, particularly in areas like Alignment. So Adobe has announced that it will accelerate the introduction of features into web mode. To help, we have a copy of each of the features we've just announced. To be clear, these features will be available for all of your web designs through the Adobe Brand Fonts service. All of the web fonts are CC compatible, but given licensing restrictions, these fonts won't be in Retina-ready form. However, they will be in web form available to use. Currently, the only place to get web font pairs is through their Placement Mono Pack. This pack includes stylistic alternates, numbers, and numerator and denominator pairs. It's a handy addition and a great value.
