Tweaking Windows is fairly straightforward. Windows usually comes with a fairly full set of built-in settings, so it is usually best to just leave them alone to see if your computer is working properly. However, you can always tweak a few settings to give your Windows a custom look. You can do this by pressing the Windows button on your computer and then pressing the Cog key. This will bring up a menu where you can configure settings. From this menu, you can adjust the size and position of your Windows taskbar, as well as the color of your desktop.

Still a pretty neat tool though. <http://renderbook.com/doc/3.4/renderbook.html>

With the new vintage-looking interface, Photoshop CC simplifies the workflow, and makes good things even better. Plus, it brings back some long-lost features from the days when people used Photoshop for making photos.
