Shortcut Scanner (LifeTime) Activation Code Download

The 'Dangerous' category is divided into four main sections: 1. files that contain a malicious link 2. files containing an executable command 3. files pointing to a command prompt 4. files with arguments that you should dispose of When you launch the application, you can choose to scan an entire disk, a specific drive or a specific folder. Furthermore, you can apply a scan schedule. You can configure the application to scan any date, every hour, a month or a week. The scheduled scans include checks and deletes. While the program does not support the proactive scanning of shortcuts, it can detect whether a shortcut is malicious or not, so you can take action immediately. Shortcut Scanner offers a scheduled scan, but you can also perform a single scan of a target drive, a folder, a local drive or a shortcut. Right from the start, you should know that Shortcut Scanner does not feature proactive scanning. In other words, it cannot analyze the shortcuts as you create them, in real time, although it would only add to its value. Instead, the application works just like an antivirus scanner. It can scan all the hard drives, be them local or removable ones, a specific drive, a particular folder or a shortcut. Once the scan is complete, we shift focus to the main window, which reveals a list of all the LNK files in the target location. Shortcut Scanner enables you to see the hex mode of a file, its addresses, and more. There is a checkbox in front of each link, so selecting one or multiple items is conveniently simple. Broken, suspicious and dangerous shortcuts Shortcut Scanner organizes shortcut into different categories, separating broken links from suspicious and dangerous ones. First of all, there are the broken shortcuts, which are practically useless, as they point to a target folder or application that does not exist. While not harmful, these shortcuts are pointless. Secondly, if a shortcut features arguments, Shortcut Scanner automatically sends it to the 'Suspicious category." Dispose shortcuts marked as dangerous The category that gives us chills and that should interest us the most is the 'Dangerous' category. To be included in this category, a shortcut must match several criteria. For instance, it must point to a command prompt or a terminal, it must include malicious shortcuts, and it must contain arguments. Furthermore, a file size which is bigger than 4KB also raises questions
