Q: Optimization: Product of n Series Consider a matrix A with the property that its eigenvalues λ_i are all real. The columns of the matrix X form an orthonormal basis for the eigenspace associated with λ_1 . The columns of the matrix B form an orthonormal basis for the eigenspace associated with λ_2 . For any $t \in \mathbb{R}$ let X_t be the matrix $B^{-1}AB^t$. Then my question is as follows: How to optimize the function $f(t) = X_t^T X_t$? A: We have

$$\begin{aligned} &= \lambda_1^2 \sum_{i=1}^n |x_i|^4 + \lambda_2^2 \sum_{i=1}^n |x_i|^4 + 2 \\ & \lambda_1 \lambda_2 \sum_{i=1}^n \text{Re}\{x_i^2 \bar{x}_i^3\} \end{aligned} \quad +$$
$$\lambda_1^2 \lambda_2^2 \sum_{i \neq j} |x_i|^2 |x_j|^2$$

So we need to maximize $f(t) = \sum_{i=1}^n |x_i|^4$ subject to the constraints $\lambda_1 = \lambda_1 \sqrt{\sum_{i=1}^n |x_i|^4}$, $\lambda_2 = \lambda_2 \sqrt{\sum_{i=1}^n |x_i|^4}$, which is equivalent to $\sum_{i=1}^n |x_i|^4 = 1$

The house of the American author, who has written about 'Breaking Bad' star Walter White, was ransacked last week, according to cops. But when thieves broke into the home in Georgia in March, they instead robbed a different author, Bill Bryson, who also lives in the state. The raiders pretended to be police officers, and had a uniform on. But cops are now trying to track down the two miscreants, who are thought to have left after stealing Bryson's debit card. And the cops are now investigating the first burglary, too, according to local news station WGCL. It's understood that the raid on the house of Walter White is linked to the second one, which led to the removal of the officers' uniforms. Bryson, who has won seven Pulitzer Prizes, was woken up on Sunday night by the sound of his dog barking. When he looked through the front window of his home, he noticed that all the doors and windows were locked. The author, who's called by his middle name, William, then looked at his phone to see a message from his neighbour telling him to call 911. (Image: WGCL) (Image: WGCL) He then called his security team who arrived at his home within 10 minutes.

zzCamera is a handy tool for taking snapshots of your webcam using Windows XP and Vista. Just double-click the downloaded file to start zzCamera. In addition to a few basic image settings, zzCamera also allows you to do some basic image manipulation. Vibration dampening is a common concern with components in mechanical systems. For example, the performance and reliability of a jet engine is influenced by the effectiveness of the vibration dampening system, e.g., system dampers, that dampen vibrations and/or other forces and motion from the system (e.g., engine) to an aircraft structure. To improve performance and/or reduce part count, a number of approaches have been developed to dampen vibration forces and/or motion. In an effort to reduce weight, for example, it is advantageous to manufacture a system damper that will be lighter than conventionally manufactured system dampers. However, the lighter weight construction may not adequately dampen or control vibration forces. Accordingly, there is a need in the art for system dampers that may be implemented in smaller form factors and provide robust vibration control, at least in one direction of vibration. Q: Unit of measurement "0.5" in C? I have found the following code, where "0.5" is used. static float f = 0.5f; static float g = 0.5f; static float h = 0.5f; I have been looking for "0.5" as some kind of unit of measurement in C, but I haven't been able to find it. It is not a class or variable, but it seems to be a constant in some function. Can someone help me what it is? A: It's a literal, in this case a floating point literal. Q: How to search in multiple columns of different data types and get a result Given a data frame in R result
