Full review Keynote | Konversation When Adobe wants the world to know something, they'll trumpet it loudly. It just takes a second or two for the message to be spread. Project Velocity Michel announced August 2, 2014, "Adobe Photoshop Smackdown: One Month Shipping" . I found out about it when I saw a small banner on the Adobe support site near the bottom of the page. That banner was a reference to the blog post. All the low-hanging fruit is now processed, leaving only the messy work of extending the document borders for resizing, adding alpha channels, harmonizing a palette, adding actual mockup pooling, and performing more of the image correction. I've been reviewing Photoshop since Photoshop 3.0, one of the first (and most important) major version releases. Since then, there has never been a full release in a single, year-long increment. There have been several major versions inside 1 year, of course, but they were tidied up in the subsequent year. That's changed with Adobe Photoshop Lightroom 5, which is the first version that takes advantage of an entire year's worth of bug fixes, new features, and performance optimizations to have been rolled into a single release. A lot of the same stuff really. The App Store and the iOS App Development Preview section of the Mac App Store have been around for a while now, and in a recent iteration they added the capability to run an App Preview on your iOS device simultaneously with the Playground that ships with Xcode. The new Preview Adobe apps are available separately for iOS 9 users since the Mac Preview card certainly didn't include the companion apps. Also, the Xcode Playground can be used to run the current version of Adobe Fresco, as well as the 2017 Adobe XD for Web & Mobile, the Adobe XD for Creative Cloud, and the Adobe XD for iOS app. It even works to open projects in one of them and edit them, too. Of course, the real fun is testing out these apps with your existing projects. For example, I can use both the iOS and Mac Preview versions of Adobe XD on my iMac without switching to the Mac, or I can swap to the Mac Preview version of XD if I've already opened the iOS version.
