However, the best part of working in Photoshop tools, aside from the speed and power with which you can polish your images, is the access to an expansive ecosystem of video and editing options. Among the amazing things you can do once you edit media, you have access to powerful cloud-based tools such as Adobe's new multi-camera editing solution, Adobe After Effects, Adobe Premiere Pro, Adobe SpeedGrade and Adobe Encore, which lets you do slow, stop and start time lapses, deliverable footage and recipes for the final product, and so much more. You can also use Adobe Photoshop to create video-based portfolios; publish or syndicate your work on social networks; order custom prints or posters; and integrate your video with other creative products, including Photoshop, Adobe After Effects, Adobe Premiere Pro, Adobe Lightroom, Adobe Muse, and even Adobe XD. With a subscription to Photoshop CC, you can import video, edit it, composite it with other final products like Photoshop, and animate your work. Then there is the new mark & frame functions, which let you remove/add multiple frames from a video, export them as individual files, and use them in a new video. The new function lets you add background music to videos, add voiceover and caption formatting, slow down, speed up, and freeze time. However, the really cool part is that you can make the audio and video match together, using the same effects on the audio and the same transitions on the video. This way, when you're finished, the final product is seamless.

“Our vision at Adobe is to make Photoshop the center of creativity everywhere,” said Shantanu Narayen, CEO of Adobe. “From watching customers and users tell us, ‘I couldn’t do it without Photoshop,’ to watching them struggle to make the Bible waterproof, we know how important Photoshop is to creative professionals the world over, and we’re constantly working to improve its robust feature set, powerful editing tools and procedural controls so they represent the state-of-the-art.” New in Photoshop CC is Share for Review, which allows users to work collaboratively on projects without leaving Photoshop. This feature, powered by Adobe’s Project Links, enables teams to easily review and comment on revisions made by other users. Users can also track changes made while reviewing a project and find out what other team members have been doing in Photoshop. Share for Review introduces two collaboration experiences: pull and push, and hub and dismiss, allowing for instant collaboration and feedback with transparency and accountability across projects. New in Photoshop CC brings a one-click Delete and Fill tool to quickly remove and fill objects in images with a single action, making it faster and easier to spot and correct objects in and out of images. The tool now also intelligently recommends replacement options based on substitution relationships with other objects in the image. And with advanced masking controls, it is now easier to quickly edit, resize, add, and subtract areas of a large image without altering neighboring areas.

(Adobe, however, is being rather dodgy about the next version of Creative Cloud, not confirming whether it will arrive.
