New is also web sharing, where you can send images to your trusted contacts, and web URL sharing, where

someone can visit a web URL and view your project in a completely redesigned website. Finally, you can send your work to your sharing service, such as Box, Dropbox, Google Drive, and SmugMug, automatically or manually, to share it in seconds. With the introduction of Smart Objects in Photoshop, Smart Filters allow you to remove unwanted parts of an image and identify the contents of an image. For example, you can remove objects from the background using Masking and smart object technology. Smart Objects apply a filter in several passes. The first pass removes the object and blends it into the background. You then add new content to the filtered layer and repeat the process, as many times as you'd like, until the object is gone from the image. You can produce interesting, artistic effects by combining Smart Objects with Layer Masks.
