Q: Why are there no systematic studies on genetic contributions to intelligence? I am currently researching this area and I have the impression that no one has investigated the subject in a systematic way. There are many studies about intelligence and genetics but I could not find any regarding the correlation between intelligence and genetic influences. So my question is: Why are there no systematic

studies on genetic contributions to intelligence? If you believe that there are such studies, or if you believe that there are potential reasons why there are no such studies, I would be interested in your answers.

A: I think you are looking for a systematic study on the way genes and brain structure interact. There is one study for the human brain (Tomas Bulf et al., 2014), it's open access and you could try to download it. The conclusion is that genetic variability contribute to brain structure and brain function in healthy individuals but not to a clinical disorder in schizophrenia. Q: How can I exclude in given in head tag? I am using tag soup to add some html to head. How can I exclude ? I tried the following but it removes my class="inform-head" too. abc A: What you're looking for is the attribute selector `*[!div.inform-head]`. Note

that the \* tells the selector to target all elements and that the ! tells the selector that it doesn't have to match the entire element. However, it seems that you're getting some odd results from this, as you'd have to be only trying to exclude the div with class inform-head, not the entire tag. It doesn't make much sense to have a div f988f36e3a
