We see the future of photo editing the same way we do the future of video editing. The coders, coders, and coders. Free software, free, and more. More openness is a leader in the marketplace. Creative flexibility is critical to the future of our industry. Everyone, every business, deserves to make their content look the best it can. We feel the future of content creation is about more people creating content, more people consuming content, and more people realizing that they have the power to truly set their own creative timeline. The time is now to widen this redefinition of creative freedom to bring our industry one step closer to the business of creating and consuming content. We

have an amazing opportunity here, but we need you in the driver's seat. When we talk about content, we mean all things. Software, hardware, and people. It's about the people who create content, the people who consume content, and the businesses that use content to create, report, and experience success. It's the people who are making it safe to share your content, whether that's social, live, or on your mobile device. It's about the people who consume it, providing the tools to free you to make the content you want, be it photos, videos, presentations, or maps. We have big plans for the web, mobile, hardware, and video. We're working to deliver an all-in-one creative kit with speed up to a million frames per second for higher quality video editing, and 14-bit raw processing and 8-bit intermediate decompressed video. We're also unifying our code base to make it easier for our developers to create, for our designers to create, and ultimately for you to create.

Take a look at the list of top ten tools and features:

1. *Magic Wand* - The Magic Wand tool is one of the staples of Photoshop since its debut. It allows you, with a single click and a tolerance of your choosing, to isolate a section of an image and use those pixels as the starting point for a selection.
2. *Gradients* - Gradients are the only way to add custom colors to your images. There is no other option, as Photoshop turns gradients into custom effects that are compatible with all types of images. Gradients save time, money and the hassle of going to image editing websites to get customizations.
3. *Adjustments* - The Adjustments panel allows you customize all of the most common editing options, such as brightness, contrast, hue, saturation, sharpness and more. These changes can be applied to all images in the folders of the current document.

In addition to the new features, Adobe also unveiled new updates to the tools and features including a new thematic color palette for the Gradients tool that offers a wide variety of color sets that are easy to mix. The Gradient Brush tool has also been improved with the introduction of Bristle Doodle, a new brushstroke that adds dimension to the gradient, making it easier to add a shading effect to any of the 28 pre-installed gradient types. There are two big improvements on the horizon aimed at the prosumer market: support for open CLP (Convert Linked Photoshop Files), and the arrival of Photoshop Mix, which is a free, full-featured streaming service bringing the power and ease of use of Adobe Photoshop to your Mac. Adobe is also adding five new Photoshop Mix branded applications to its suite: Elements, Photoshop Elements Lisp, Photoshop Mix Cosmos, Photoshop Mix Manga, and Photoshop Mix Core.
