Interestingly enough, I am still forced to use the Download button for videos. I did find out that you can double-click on some videos and they will play on Lightroom, but others won't. Clicking on the Playback button in the lower-right corner of a video in a still frame will not even start the video. It suggests that a bug exists, but I am no computer expert, so I could be wrong. Anyway, the thing that I like most about using Lightroom is the range of settings that are being created and used in-camera. seems like iOS 11.1 will be the cause of a similar dramatic slowdown as iOS 11.0 (Oct ~blessed) did to my 2013 iMac that I was using as CAD, now all my drawings take over 20 minutes to render what they do in the ~5 minutes when iOS 10. I've updated from CS6 to **CS6 Creative Cloud** and everything seems faster. You're right about performance, there is a huge difference in speed. I find that I have to use Photoshop mostly in its **Developer** version or I will have terrible slow downs.

I use the standard version of Photoshop for other things.

While I'm not really using Pro - I'm strictly a beginner!

Your review is very helpful. Thanks Hi, my computer with the new imac just shut down about 70% into my work. I am by no means an expert, but I am learning. My project is different since I am an artist and not a Graphic Designer. Photoshop is about as important to me as my ability with apples. I guess it was time for me to get a new one. Hope this helps,

Thank you

Plus, you can customize your styles, workflows, and tools so they fit your way of working. With Photoshop, your creative vision becomes the backbone of your post-production workflow. Photoshop has become the standard for the creation, manipulation, and modification of photographic images. While the Photoshop team recognizes the value of the existing photographer workflow, the team is acutely aware of the limitations within a typical photographer's workflow. Meaning, that you don't have similar tools readily available for every photographer. e3d0a04c9c
