Photoshop CC 2018 Version 19

The latest update, which Adobe calls both Version 24 and Photoshop 2023, brings technology announced at the annual Adobe Max conference in October. Highlights include simpler, more accurate Object Selection; One Click Delete and Fill, a new way to remove an object from a scene; and integration with Adobe Express. New features still in beta include Live Gaussian Blur, Live Gradients, a new Neural Filter for photo restoration, and Share for Review—another collaboration feature. For Windows users, a new option lets you choose whether you want auto selection to happen faster or with more stability. This review can probably be summed up as, "Adobe did a good job with Photoshop, but it needs refining". I like the clean UI, speed, and the improvements in functionality I found to be significant. New features include the ability to edit the layer order, a text tool called "Text on Glass" that allows printing photos on transparent sheets of frosted glass, and the addition of a tonal curve that allows the artist to normalize the image for color conversion and soften shadows. I do agree with Greg K and others that the decision to go with 64-bit was not the best one, simply because of memory limitations. The downsides of this choice are the new 64-bit limitations (which can be overcome with some workarounds), the inordinate amount of RAM needed for this version (3.4 GB) and the absolutely HUGE file size of this version (3.7GB). kentd1 thanks for the info. it does not matter what the P/U is in this case. you can not upgrade from CS6 to CS10 product key. CS6 is a full release and CS10 is a service pack of CS6. apschg does a good job with the expiratory date.
apschg Thanks again
