Photoshop 2021 (Version 22.2)

Adobe Photoshop is a very powerful and potent tool, but it isn't perfect. That said, Adobe need to work on performance and optimization, especially when you use human-crafted adjustments more frequently. The best way to do that is to bring Adobe Photoshop to iOS. Photoshop will run on the iPad and the Kindle Fire HDX tablets for sure. Use the Touch Bar as well, so you can select and preview multiple images simultaneously. It would be great if MacOS users could use Photoshop with their iPad, too. Quadrapassel would be a great place to start. The app features a horizontal tool bars layout, a sidebar and picture-in-picture, a feature I like as it makes working with many images easier. There is good reason why Adobe has not really made significant efforts to bring Photoshop to iOS. It is difficult to develop a tool like Photoshop in such a way that will work well on mobile devices, even the iOS ones. As much as I would love Photoshop for the iPad, it would be a lot of extra work and I'm a bit concerned about the quality of the tool if they don't follow a tight workflow. We are, however, getting closer to Photoshop for the iPad, feature wise. The current beta is even close to stable, although it is obviously not complete. The interfaces that appear in Photoshop are not only more compact, but also use a holistic design trend leaning more on the recent icons-for-ideas design direction, such as MindMeister's floor plan grid and Illustrator. It sports a few new options, too. Photoshop now integrates color science and composition photography in two new tool windows, while one of the World Layers, the Structure Layer, also brings links to corresponding effects.
