**Above:** One of the most iconic photos of the 20th century was William Selby's *"Berlin, the Wedding"* (1923). **Below:** What Photoshop and Lightroom are capable of in the editing process, particularly relighting and art direction, would have been nearly impossible to do in the dark days before digital photography became so prevalent. There are settings in this app that you should understand before you do any retouching. For example, there are a set of default profiles that you will use as effects for this app. Thus, you can't just put your image into this app and work on it as you like it. Even if you use these presets by selecting them from the panel, you have to know where these presets are, as they are embedded into Lightroom. This is also true for exhibition view. For example, if you put a digital image into Photoshop and work on it for retouching, you will lose your exposure, color, and contrast information. This is because you have no access to this information. This is a feature that was not available in the 18th and 19th century. The only way to learn this software is to use it. You sit down and paint with it and you will learn to understand its functions. You should just learn it on your own, as there is no suitable educational course for this app. Do your research on the Internet. The cheat sheet is a great start. One of the most important things

you need to know is whether you use RAW or not. If you do, you have to work on your image in RAW mode in the raw converter. Only then will you be able to save your photos in ProRes Raw. For RAW, this is one of the most powerful and versatile RAW processors available. Lightroom's has some RAW processing features. In addition to this, there are specific filters for RAW images. If you are using RAW, you can extend these natively with Lightroom as well. If you are not using it, I recommend using the RAW converter in Lightroom. There are no more reasons to be shooting jpeg with such a powerful software.
