Introduction: Photoshop is an incredible piece of software. It is used by most creative professionals. Photoshop is powerful and flexible enough to create anything you can think of. And it has become so popular because of the power and flexibility that it offers. It has made almost every photo editing process very easy. You do not need to learn multiple complicated editing tools to process your work. Photoshop can do all that. It has more than 50% of the market share for photo editing. On the other hand, I couldn't use the web version of ACR because it's so bad in terms of performance. I have to use Photoshop CS6 in it because it's the best product. I am moving from Lightroom to Photoshop though - photos are static. I didn't like the idea of having to re-import all of my images to make a final round of edits. This can be done directly in Photoshop and it's better in my opinion. **ABOVE:** In Adobe's Demo Zone you can see a scratch-made copy of the game Legend of Grimrock. And that's just it - there are various games that you can download free of charge or go for the paid version, including the above - then use the brushes to create your own. Feature-rich and very easy-to-follow, brushes are perfect for any newbies. Looking forward, many of the features that were added to Photoshop to meet the needs of prosumer users are also available to hobbyists and creative amateurs. With its ability to make tweaks across many different areas via a streamlined workflow, fewer crashes, improved performance, and that classy appearance, Photoshop is a great investment for the long-term.
